AB Reinvestigation of the production of the unusual polyene carboxylic acid serpentene (1a) from Streptomyces sp. Tue 3851 revealed the presence of addnl. polyene carboxylic acids. The Me esters of the new all-trans serpentene (2) and four new dicarboxylic acids (3-6) were isolated after methylation of the isolated polyene fraction. The dicarboxylic acids might result from ω - and β -oxidation of the parent compds. 1 and 2.
